

SLi3Pro Inverted Fluorescence Microscope

Version 2.0

INTRODUCTION

LAXCO has been a leading provider of high precision, cutting edge optical instruments and microscopes for over 30 years. Our products span a complete range of applications including education, clinical, life science research, and industrial. Our commitment to engineering excellence, breakthrough innovations, and cost effective solutions, makes us one of the most reliable suppliers in the industry. Our products come with a heritage of technical strength, manufacturing discipline, and a prominent reputation of advanced engineering. We currently hold over 15 patents for lighting, design, and technology and our designs incorporate numerous innovative features, address issues others may overlook, and come with a strong industry-proven reputation. Product development is based in Washington State with electrical, mechanical, and optical engineers on site.

Introducing the new enhanced SLI3PRO inverted microscope designed as a high quality fluorescence microscope, ideal for every research need from the very basic to the high performance applications. Laxco has improved on the original design of the LMI3000 by introducing a completely redesigned fluorescence light path. The original SLI6, with its innovative design took a Giant Leap Forward in Fluorescence Microscopy and now, the SLI3PROs enhance SeBaLIT™ design is changing the path to seeing Florescence.

KEY FEATURES

INFINITY OPTICAL SYSTEM

Spherical and chromatic corrected infinity optical system providing excellent optical quality in any application.

LARGER FIELD OF VIEW

The Field of View has been increased to 22mm through the eyepieces.

ERGONOMIC DESIGN

Compact stand design with focus controls placed low on the microscope stand to provide optimal ergonomics.

LIGHT CUBE AND EXCITATION LED IDENTIFICATION

Light cubes and excitation LED are identified allowing identification by the SeBaLIT™ software.

LED ILLUMINATION

Long life LED illumination in both transmitted and fluorescence modes.

PHASE CONTRAST ILLUMINATION

Phase contrast illumination system provides excellent contrast for viewing of live cell/tissue culture samples.

MULTI-ILLUMINATION CONTRAST (MIC)

A new approach to microscopy that combines multiple contrast methods into a simple easy-to-use system that's almost entirely digital.

SINGLE & MULTI-ILLUMINATION MODE

Two modes of operation for more versatility.

ATTACHABLE MECHANICAL STAGE

The optional mechanical stage provides precise sample control at higher magnifications and is user installable with no tools required.

ERGONOMIC DESIGN

Compact stand design with focus controls placed low on the microscope stand to provide optimal ergonomics.

EMISSION FILTERS

One multi-wavelength and three single wavelengths.

ENHANCED DARKFIELD CONTRAST

Provides a simple means to locate your focal plane while remaining in fluorescence mode.

SEBALIT™ EPI-FLUORESCENCE ILLUMINATION TECHNOLOGY

New fluorescence illumination technology utilizing a cross-beam splitter creating the same focal plane and equal distance for all channels.

NO DARKROOM REQUIRED

A new approach to microscopy that combines multiple contrast methods into a simple easy-to-use system almost entirely digital.

SEBALIT™ SOFTWARE

Allows control of all illumination through a computer.

APPLICATIONS

Live Cell Culture Analysis
Bacteriology
Microbiology
Neurology and Neuroimaging
Tissue Culture Studies

Drug Discovery
Development Biology
Transgenics
Biotechnology
Diagnostics Fungal Cultures

CONTRAST METHODS

Brightfield

Ideal for stained samples

Phase Contrast

View unstained live cells

Fluorescence

Up to 3 fluorescent channels

MULTI-ILLUMINATION CONTRAST (MiC)TM

A new approach to microscopy that combines multiple contrast methods into a simple easy-to-use system, controlled digitally through a membrane switch located on the front panel of the microscope; users can turn on any combination of illumination techniques maximizing the specimen details observed.

SEBALIT™ TECHNOLOGY

THE SEBALIT™ TECHNOLOGY

Laxco SeBaLiT™ Technology leaps forward in simplifying a fluorescence microscope by removing a majority of mechanical moving parts, while taking advantage of wavelength specific LEDs coupled with low signal loss. Combined with a multi-band pass filter set, users can achieve rapid switching between channels for real-time viewing of their samples.

Laxco's patent pending approach is the first of its kind that delivers this level of functionality and image quality into a traditional inverted fluorescence microscope. Combined with single bandpass filters, users can produce publication quality photos. The innovated design (patent pending fluorescence module) is located directly below the objective nosepiece reducing the illumination for greater efficiency.

SIMULTANEOUS VIEWING OR IMAGING

Simultaneous viewing or imaging of your specimens removes registration issues that can arise by changing microscope components on traditional fluorescence microscopes.

WAVELENGTH-SPECIFIC LED ILLUMINATION

Adjustable wavelength specific LED intensity to create the perfect ratio between background and signal providing better signal-to-noise ratio, more precise excitation.

LIGHT PATH

Minimal moving parts. All three light paths converge into a single specially engineered and designed prism block located just below the objective turret.

CHANNEL SELECTION

Rapidly switch between excitation light sources by selecting the appropriate LED. Select a single channel or all three.

LIMITED LIGHT LOSS

95% light transmission through SeBaLit's specially designed prism.

*SEBALIT™

ILLUMINATION

LED FLUORESCENCE

- 50,000-hour life span
- No alignment required
- LED wavelength specific to filter set
- Adjustable light intensity

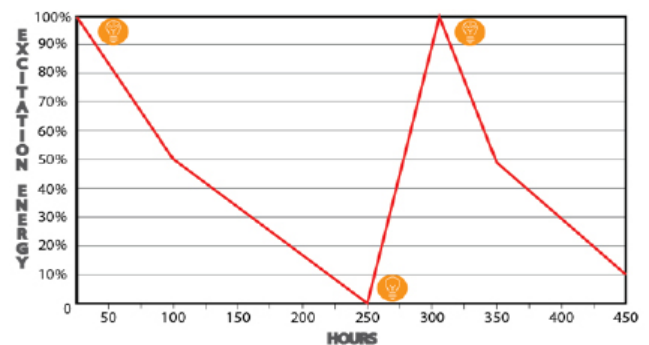

LED Intensity over 50,000 hours

KEY FEATURES

- Blocks out 90% of unwanted light
- Coatings do not break down over time
- Superior signal to noise ratio
- High signal to noise ratio
- Stable light excitation energy
- No warm-up or cool-down time
- Produces no harmful UV light

Mercury Bulb over 250 Hours

LED's excitation energy degrades less than 5% over a lifetime of 50,000 hours; where mercury drops off 50% in the first 100 hours.

NOTE: With wavelength specific LED, the filters have no unwanted light to block and are ideally suited for imaging at single wavelength.

FILTERS

HARD-COATED FILTERS

Laxco uses hard-coated filters to provide superior performance and durability. Unlike more traditional soft coated filters which only block out 60% of the unwanted light and break down over time, the hard-coated filters block out 90% of the unwanted light, and does not break down over time under any wavelength of light. This greater efficiency produces a superior signal to noise ratio.

STANDARD SLI3PRO
EMISSION SPECTRUM

NOTE: Best signal to noise ratio and image resolution can be achieved with semi-apo fluorite objectives and wavelength-specific LED.

EPI-FLUORESCENCE

INDIVIDUAL CHANNEL VIEWING

Image or view each channel separately using a wavelength-specific LED with matching EX/EM bandpass filter set.

MULTI-CHANNEL VIEWING

No manual overlay or PC software is required to view a multi-channel image. No need to capture each channel individually. All channels can be viewed directly, in real-time on the microscope and/or camera. Using our latest SeBaLiT™ software virtually remove any cross talk across fluorescent channels.

Stained BPEA Cells as seen under 40X Plan Flurite objective through SeBaLiT™ software.

1. RFP 2. DAPI 3. GFP 4. Combined 3 channels

OPERATION

COMBINED MULTI-CONTRAST

Combine fluorescence, phase, and Enhanced Darkfield Contrast.

LIGHT SHIELD

No need for a darkroom with Laxco's adjustable light shield.

CONTROLS

FLUORESCENCE CHANNELS

Switch between each fluorescence channel (multi-bandpass filter set requires minimal moving parts).

CONTRAST METHODS

Quickly switch between BF/PH and Enhanced DC.

MULTI-CHANNEL MODE

Quickly switch to multi-channel mode.

BRIGHTNESS CONTROLS

Adjust the brightness for each contrast method or fluorescent channel individually, and the system remembers it.

SINGLE CHANNEL MODE

In this mode, users can have the ability to visualize and adjust each individual channel/contrast method brightness level.

MULTI-CHANNEL MODE

One of the key features to the SLi6 Series product line is its multi-channel mode. When selected the user can have the ability to switch on and off any combination of contrast methods. The system utilizes its smart intelligence to recall previously adjusted brightness settings set in single channel mode and recognizes what filter set is in the light path. In this mode users can easily move between channels and capture images quickly.

When combined with a multi-bandpass filter set, users can switch between channels/contrast methods without the need of moving any microscope components.

SEBALIT SOFTWARE

SeBaLiT™ Software, in conjunction with its companion controller, changes the way you control your fluorescence microscope by simplifying the complexities associated with the traditional fluorescence microscope. Its seamless integration of camera and microscope creates an easy-to-use fluorescence microscope. SeBaLiT™ Software allow for the user to add annotations and perform measurements on their images, provides complete camera control and capture control, multi-channel observation at the click of a button, and fluorescence imaging settings. The latest version of the software includes a newly developed algorithm that virtually removes any possibility for cross talk.

FLUORESCENCE CONTROL

- Single Channel Viewing
- Multi-viewing Channel Viewing
- Individual Channel Intensity Control
- Contrast Mode Selection
- Capability to recognize fluorescence filters currently installed

CAMERA CONTROL

- Auto / Manual Exposure Time
- White / Black Balance
- Color Temperature Control
- Brightness / Contrast
- Black & White / Color Mode
- Snap / Video Mode

ANNOTATIONS

- Calibration
- Measurements
- Text
- Lines, Squares, and Circles
- Angular Measurements

CAPTURE CONTROL

- Save Format
- Time Lapse Control
- File Name Assignment
- Software Information

* NOTE - Laxco™ is continually striving to improve both the quality and innovative technology used on their microscopes, therefore, specifications and appearances are subject to change without any notice or obligation on the part of the manufacturer. All Laxco microscopes are manufactured in conformance to current antifungal standards. The observation tube is resistant to bacteria and fungi that may be present in the environmental setting of the microscope.

CONFIGURATION CHART

Microscope Weight 55lbs
 Power Requirement is 50Hz and will work in USA and Canada
